- 13. (new) The hard sintered body indexable insert as recited in Claim 1, wherein the hard sintered body is bonded directly to the tool substrate through the bonding layer.
- 14. (new) The hard sintered body indexable insert as recited in Claim 1, wherein the bonding layer contains 20 wt % to 30 wt % Ti and 20 wt % to 30 wt % Zr, and the remainder of Cu and inevitable impurities.
- 15. (new) The hard sintered body indexable insert as recited in Claim 1, wherein the bonding layer contains 0.5 wt % to 20 wt % Ti and/or Zr and contains 10 wt % to 40 wt % Cu and the remainder of Aq and inevitable impurities.
- 16. (new) The hard sintered body indexable insert as recited in Claim 1, wherein the bonding layer contains 0.5 wt % to 10 wt % Ti and/or Zr, and contains 5 wt % to 20 wt % In and 15 wt % to 35 wt % Cu, and the remainder of Ag and inevitable impurities.
 - 17. (new) The hard sintered body indexable insert as recited in Claim 1, wherein on a surface of the hard sintered body indexable insert, there is formed a coating layer comprising at least one element selected from the group consisting of elements belonging to groups IVa, Va, VIa in the periodic table and elements Al, Si, and B, or at least one compound selected from the group consisting of nitride, carbide, or oxide of at least one metal selected from this group, and their solid solutions.
